EXPERIENCE

Software Architect & Consultant

May 2026 – Present

Stealth Startup

Ontario, Canada

- Architected and built a full-stack peer-to-peer marketplace end to end as sole developer, delivering a cross-platform mobile app and web admin portal on Flutter and Supabase, structured with Clean Architecture and Riverpod.
- Designed a Stripe Connect payments system with escrow-style authorize-and-capture flows, deposit holds, seller payouts and automated dispute settlement, implemented through serverless edge functions and webhooks.
- Architected a real-time location-tracking and safety platform (Flutter, Firebase, Google Maps) designed to scale to millions of location updates, with an event-driven geofencing pipeline that sends push alerts and escalates unacknowledged ones.
- Secured multi-tenant data with Postgres row-level security and Firestore RBAC rules, covered by automated tests.
- Established TDD and CI quality gates across unit, widget, integration and end-to-end tests, and isolated third-party SDKs behind provider-agnostic interfaces so vendors can be swapped without UI changes.

Senior Software Engineer

July 2024 – April 2026

[Careem](#)

Islamabad, Pakistan

- Engineered and scaled an IoT platform by integrating 1000+ smart mobility vehicles from two vendors into Go (Golang) microservices using TCP, with IMEI-based connection validation.
- Improved reliability by migrating observability to Dynatrace (40% lower MTTR), tuning slow DB queries (25% faster responses), and moving IoT updates to Kafka events (10% lower latency).
- Delivered compliance and fraud-prevention features, including geo-fencing in the backend and operations portal (100% regulatory compliance) and a backend pre-authorization workflow that reduced financial losses by ~20%.
- Partnered with platform teams to migrate services off deprecated APIs, defining alerts and metrics for the new APIs and event processors to ensure a safe cutover.
- Improved release safety and incident response with feature toggles for staged rollouts, RFCs, Product Readiness Reviews, on-call leadership and incident documentation, cutting outage recovery time by 35%.
- Raised the team's test coverage standard to 90% across unit, integration and acceptance tests while shipping 5+ operations portal features and resolving 20+ critical bugs.
- Mentored and onboarded new engineers to the team's systems, coding standards and operational practices.

Senior Software Engineer

September 2022 – July 2024

[Fiber Mountain](#)

Islamabad, Pakistan

- Built AWS and GitHub Actions build pipelines, cutting packaging time by 15% and speeding up product delivery.
- Standardized linting, pre-commit hooks and TDD across 6+ projects, raising code coverage by 30%.
- Led the move from synchronous to event-driven architecture, speeding up real-time data updates by 15%.
- Mentored engineers through 1:1s and feedback sessions, increasing team velocity by 5%.

Senior Software Engineer

October 2021 – September 2022

[Retailo](#)

Islamabad, Pakistan

- Transitioned 5+ monolithic modules into microservices, improving API response time by 25%.
- Led the redesign of core authorization and configuration services to support a user base of 50K+.
- Built a private NPM authentication package through GitLab CI/CD, now used in 15+ backend services.
- Designed distributed transaction handling across microservices, preventing data inconsistencies during failures.

Software Engineer II

January 2019 – September 2021

[Xgrid](#)

Islamabad, Pakistan

- Built an Angular frontend for high-volume real-time data, using service workers to boost UI performance by 20%.
- Built serverless APIs with Auth0 authentication on AWS Lambda and API Gateway.

EDUCATION

Master of Applied Computing, Wilfrid Laurier University, Canada

September 2025 – December 2027 (Expected)

Bachelor of Mechatronics Engineering, NUST CEME, Pakistan

September 2014 – July 2018

SKILLS

Technical Skills Go (Golang), TypeScript, JavaScript, Dart, Java, Node.js, NestJS, React, Next.js, Angular, Flutter, Riverpod, AWS, Firebase, Supabase, PostgreSQL, Kafka, Stripe Connect, Microservices, REST APIs, Event-Driven Architecture, Clean Architecture, System Design, CI/CD, TDD, Git, Linux, Bash, New Relic, Sentry, Dynatrace
