Zeeshan Mahmood

Brantford, ON | +1 (416) 625 4440 | hello@offthemainthread.com | linkedin.com/in/zeeshanmahmood08

PROFESSIONAL SUMMARY

Senior Software Engineer with 8 years of experience building backend and platform systems in Go, Java, Node.js and Kafka. Background in IoT, real-time data, microservices and on-call leadership.

TECHNICAL SKILLS

Languages: Go (Golang), Java, TypeScript, JavaScript, Dart
Backend: REST APIs, Microservices, Event-Driven Architecture, Kafka, Distributed Transactions, Feature-Flag Rollouts
Frontend and Mobile: React, Next.js, Angular, Flutter, State Management, Design Systems, Reactive Programming, SSR
Cloud and Data: PostgreSQL, DynamoDB, Firebase, Supabase, AWS, Stripe Connect
Practices: Clean Architecture, System Design, Test-Driven Development (TDD), CI/CD, Git, Linux, Bash
Observability: Dynatrace, New Relic, Sentry

WORK EXPERIENCE

Software Architect and Consultant | **Stealth Startup, Ontario, Canada** | May 2026 - Present

- Architected and shipped a peer-to-peer marketplace solo in 2 months, now in active beta with 200+ testers: a cross-platform Flutter app and web admin portal on Supabase using Clean Architecture and Riverpod.
- Designed a Stripe Connect payments system (authorize-and-capture escrow, deposit holds, seller payouts, automated dispute settlement) on serverless edge functions and webhooks, removing manual payout and dispute handling.
- Built a real-time location-tracking and safety platform (Flutter, Firebase, Google Maps) with an event-driven geofencing pipeline that sends push alerts and escalates unacknowledged ones.
- Enforced multi-tenant data isolation with Postgres row-level security and Firestore RBAC rules (zero cross-tenant access in security tests), and set up TDD and CI gates across unit, widget, integration and end-to-end tests.
- Isolated third-party SDKs behind provider-agnostic interfaces, so database and auth swaps needed no UI changes.

Senior Software Engineer | **Careem, Islamabad, Pakistan** | July 2024 - April 2026

- Scaled an IoT platform by integrating 1000+ smart mobility vehicles from two vendors into Go microservices over TCP with IMEI-based connection validation.
- Cut MTTR by 40% by migrating observability to Dynatrace, sped up responses by 25% by tuning slow database queries, and reduced IoT update latency by 10% by moving to Kafka events.
- Reduced financial losses by ~20% with a backend pre-authorization workflow, and delivered geo-fencing across the backend and the Next.js operations portal to meet regulatory requirements.
- Designed for graceful degradation over full failure and led incident response, cutting outage recovery time by 35% through staged rollouts, RFCs, Product Readiness Reviews and incident documentation.
- Raised the team's test coverage standard to 90%, shipped 5+ operations portal features, resolved 20+ critical bugs, and mentored and onboarded new engineers.

Senior Software Engineer | **Fiber Mountain, Islamabad, Pakistan** | September 2022 - July 2024

- Led the move from synchronous to event-driven architecture (15% faster real-time data updates) and built AWS and GitHub Actions pipelines (15% less packaging time).
- Standardized linting, pre-commit hooks and TDD across 6+ projects, raising code coverage by 30%, and mentored engineers through 1:1s and feedback sessions.

Senior Software Engineer | **Retailo, Islamabad, Pakistan** | October 2021 - September 2022

- Broke 5+ monolithic modules into microservices (25% faster API responses).
- Designed distributed transaction handling that prevented data inconsistencies during failures.
- Led the redesign of core authorization and configuration services for 50K+ users and built a private NPM authentication package (GitLab CI/CD) now used in 15+ backend services.

Software Engineer II | **Xgrid, Islamabad, Pakistan** | January 2019 - September 2021

- Built an Angular frontend for high-volume real-time data (service workers, 20% faster UI) and serverless APIs with Auth0 on AWS Lambda and API Gateway.

EDUCATION

Master of Applied Computing | **Wilfrid Laurier University, Canada** | Sept 2025 - Dec 2026 (Expected)

Bachelor of Mechatronics Engineering | **NUST CEME, Pakistan** | Sept 2014 - July 2018
